

Anatomy and Physiology
Research Paper
Lab - Fall 2009

Objective: Write a 2-4 page research paper on a homeostatic disruption or disease and explain how the disease affects at least one body system.

General guidelines: Your paper should be typed, double spaced and use a 12pt. font and standard margins.

Resources: You must use a minimum of 3 sources other than your textbook. One source must be a journal article. Web resources must be *gov* or *edu* pages. You must include a bibliography and document sources of information.

Due: Papers can be turned in at any time but must be handed in by Tuesday, December 1st. No late papers will be accepted.

Grade: The research paper grade is 15% of your lab grade.

Possible topics: Choose a topic that interests you. Below are some possible topics but feel free to choose one that is not listed. Only one student may research a specific topic.

Alzheimer disease
Huntington disease
Multiple Sclerosis
Parkinson disease
Meningitis
Pneumonia
